GridFlex Tokens Register
Product tour

Sixteen screens of the specimen register and portal: the public register, the token record, sites and market by region, the network pilot view, the four portal roles, the methodology mapping and the expression-of-interest form.

RELEASE
Register v0.1 · specimen (synthetic) data

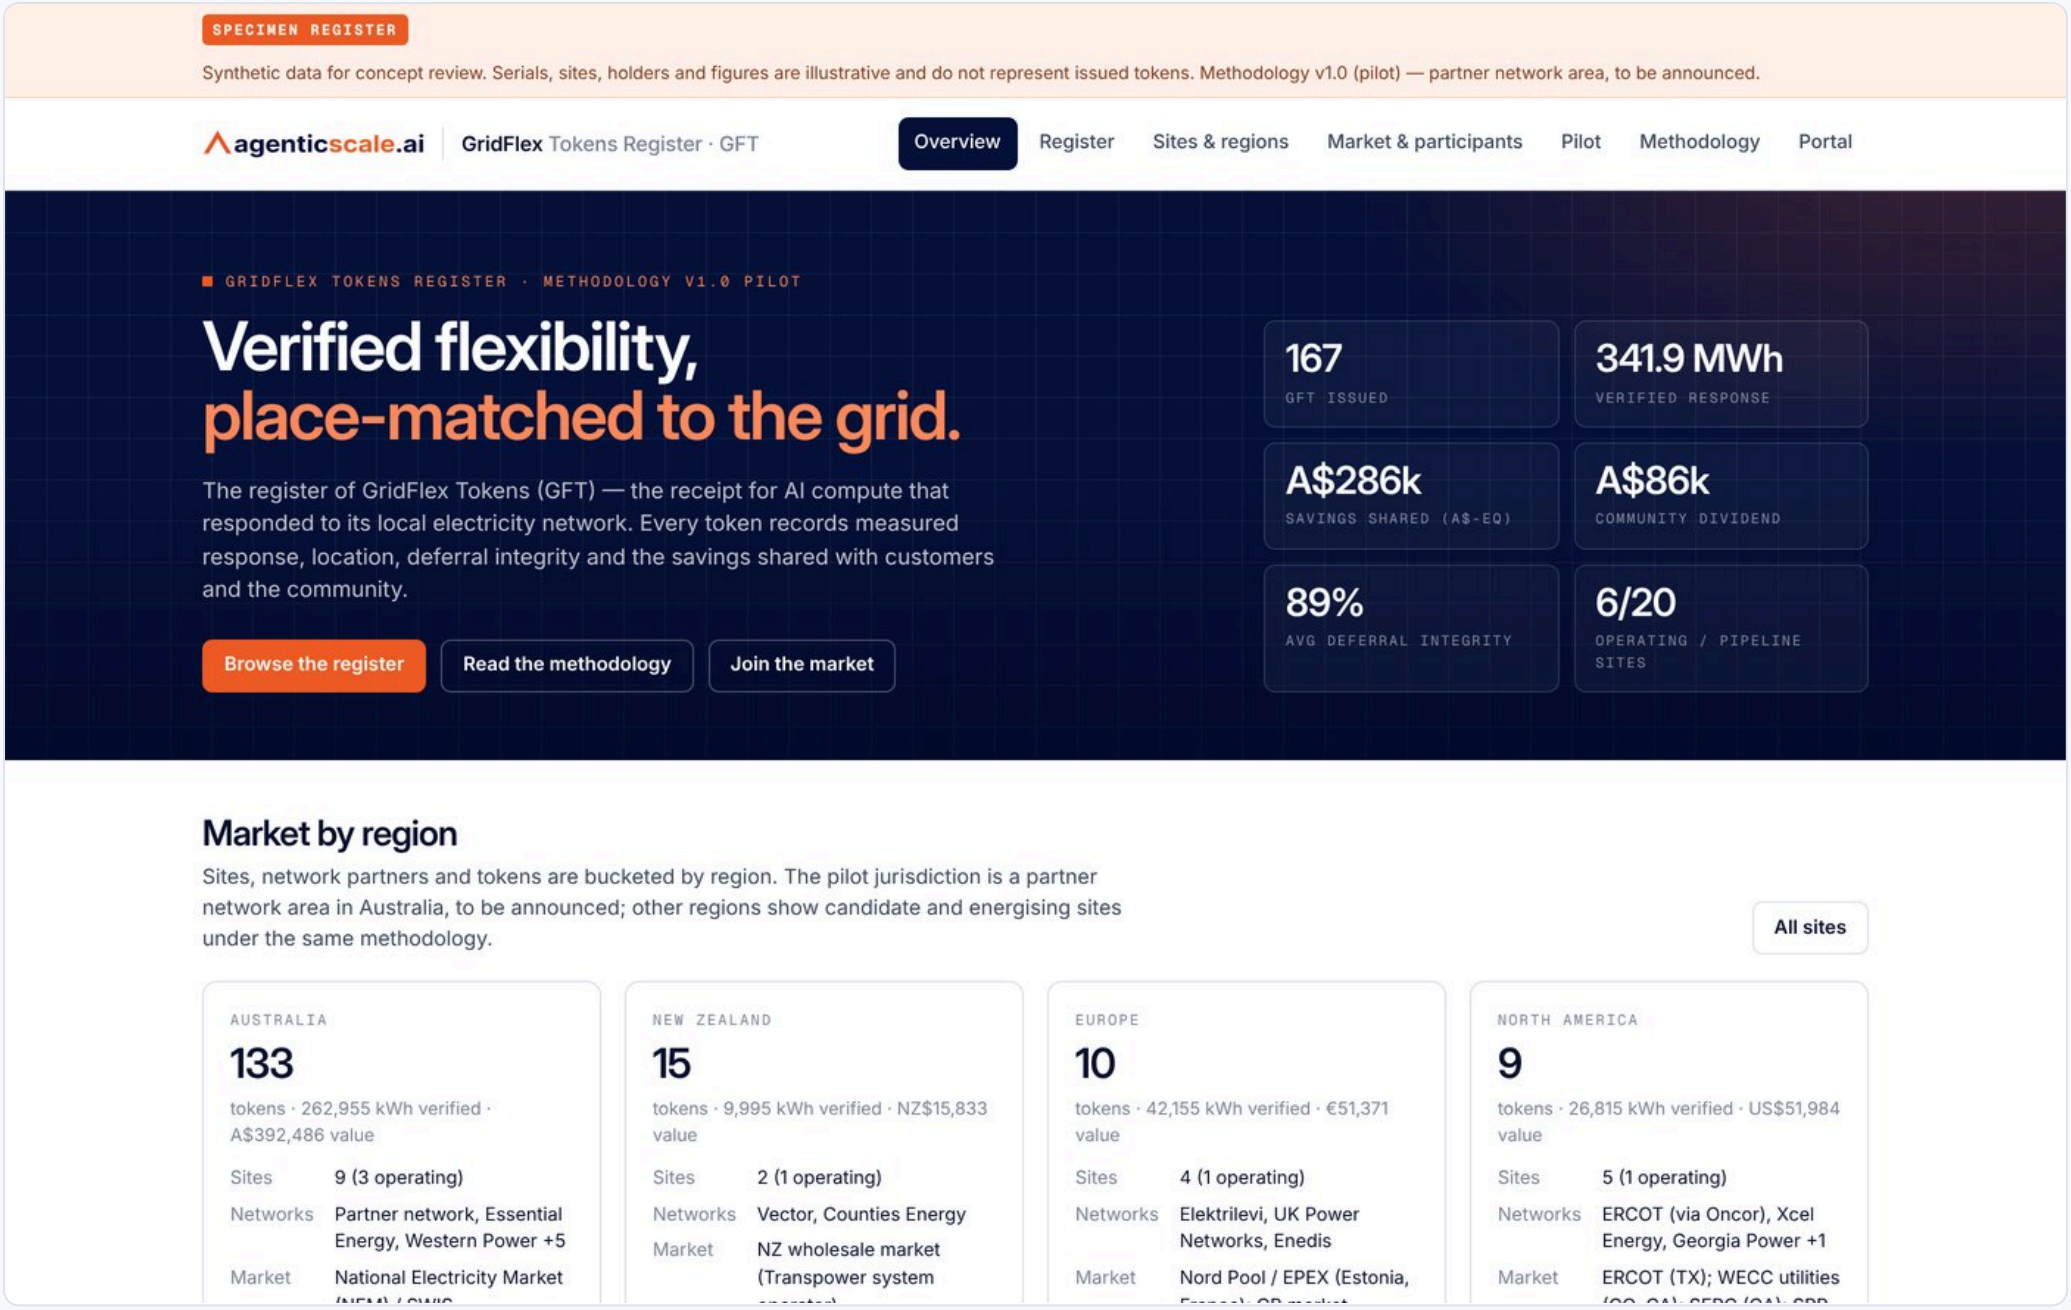

STANDARD
GridFlex Methodology v1.0 (AGT-GFM-1.0)

PILOT NETWORK
Partner network

DATE
8 November 2026

01 · Overview

the public register: tokens issued, verified MWh, savings shared, community dividend, market by region

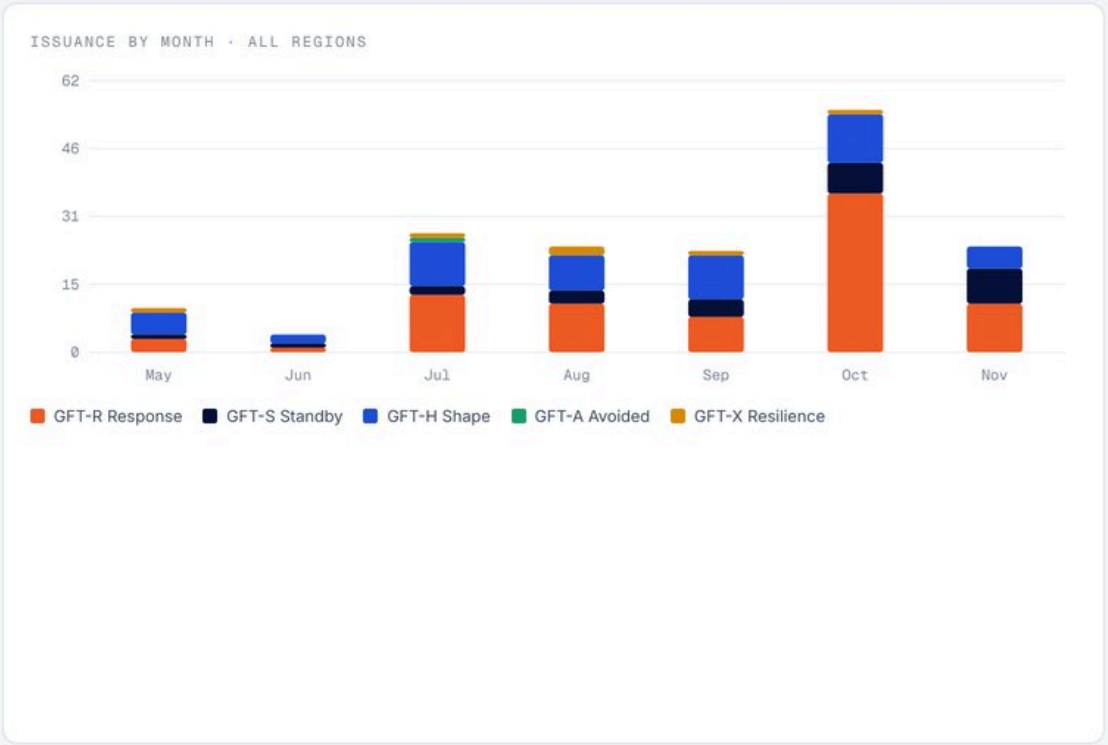

02 · Overview

issuance by month and class, lifecycle status, and who the register serves

agenticscale.ai | GridFlex Tokens Register · GFT

Overview | Register | Sites & regions | Market & participants | Pilot | Methodology | Portal

Who the register serves

One token, four readers. The same record answers a different question for each participant — and all of them reduce to lower energy cost per unit of compute.

NETWORKS & RETAILERS

Firm, bankable flexibility at the node

Co-sign events you signalled, count verified response against constraints,

REGULATORS & GOVERNMENT

Scheme integrity you can audit

Public register, immutable audit log, stacking disclosure, single-use claims and a community dividend

AI COMPUTE BUYERS

Cheaper GPU-hours with a receipt

Flex-tier compute priced below firm. Tokens attributed to your workloads

OPERATORS, INVESTORS & INSURERS

A metered KPI, not a vibe

Standby and Avoided classes support financing KPIs and performance wraps; every figure is metered,

03 · Register

all tokens, filterable by region, class, network, site, status and holder segment; CSV export

SPECIMEN REGISTER

Synthetic data for concept review. Serials, sites, holders and figures are illustrative and do not represent issued tokens. Methodology v1.0 (pilot) — partner network area, to be announced.

Buyers, networks, regulators and partners — the four sides that make a token worth something.

Buyers & flex tiers | Network partners | **Regulators & government** | Research & technology | Join the market

The register is designed to be legible to regulators without a market being created first: a public register, an immutable audit log, stacking disclosure and single-use claims (§11–§13). Engagement starts with the pilot jurisdiction and expands with each adopting network.

BODY	REGION	RELEVANCE TO GRIDFLEX	ENGAGEMENT
Australian Energy Regulator (AER) Network revenue, connection and tariff rules (NEM)	Australia	Flexible-connection tariffs; recognition of non-network solutions and avoided augmentation	To engage
Australian Energy Market Commission (AEMC) National Electricity Rules	Australia	Demand response mechanisms; consumer energy resources framework	To engage
Australian Energy Market Operator (AEMO) System and market operation	Australia	Wholesale demand response; minimum system load (SA)	● Engaged (research)
State regulator State essential services regulator	Australia	Pilot jurisdiction licensing and consumer protection	To engage (pilot)
Essential Services Commission (VIC) Victorian energy regulation	Australia	Victorian Energy Upgrades alignment	To engage
IPART (NSW) NSW energy schemes administrator	Australia	Peak Demand Reduction Scheme (PRCs) alignment for Standby class	To engage
Electricity Authority (NZ) NZ electricity market regulator	New Zealand	Distribution flexibility and real-time pricing	To engage
Estonian Competition Authority / Elering Estonian regulator and TSO	Europe	DSO flexibility, EU network code on demand response	To engage
Ofgem GB energy regulator	Europe	DSO flexibility markets; demand flexibility service	To engage
CRE French energy regulator	Europe	Flexibility calls; data-centre connection conditions	To engage

10 · network pilot

KPIs vs §14 targets, verified kWh by week, deferral integrity, lifecycle and phases

SPECIMEN REGISTER

Synthetic data for concept review. Serials, sites, holders and figures are illustrative and do not represent issued tokens. Methodology v1.0 (pilot) — partner network area, to be announced.

agenticscale.ai | GridFlex Tokens Register · GFT

Overview | Register | Sites & regions | Market & participants | Pilot | Methodology | Portal

PILOT MONITORING

Network pilot — Pilot Precinct

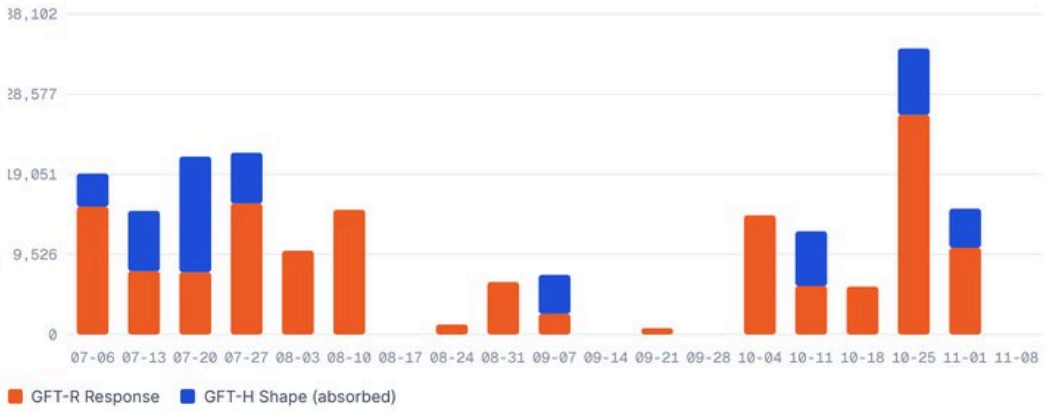

Phase 1 — 90-day minting pilot under v1.0 (shadow minting since 1 July 2026) · started 01 July 2026 · node PILOT-ZS-N01-11kV-F02 · V2000 ×8 (G4500 class) · 3.2 MW dispatchable. This page is the weekly monitoring view for the pilot: KPIs against Methodology §14 targets, response by week, deferral integrity and the event log.

Pilot tokens

KPIS VS TARGETS (§14)

Verified events	39 / ≥ 20
Average deferral integrity	90% / 90%
Verification lag (days)	8.9 d / ≤ 15 d
Double-claims detected	0 / = 0
Community dividend accrued	A$36,694 / A$25,000
Midday surplus absorbed (MWh)	54.6 MWh / 60 MWh

VERIFIED KWH BY WEEK · RESPONSE VS SHAPE

DEFERRAL INTEGRITY DISTRIBUTION · RESPONSE

0–70%	3
70–85%	3
85–95%	16

LIFECYCLE · PILOT TOKENS

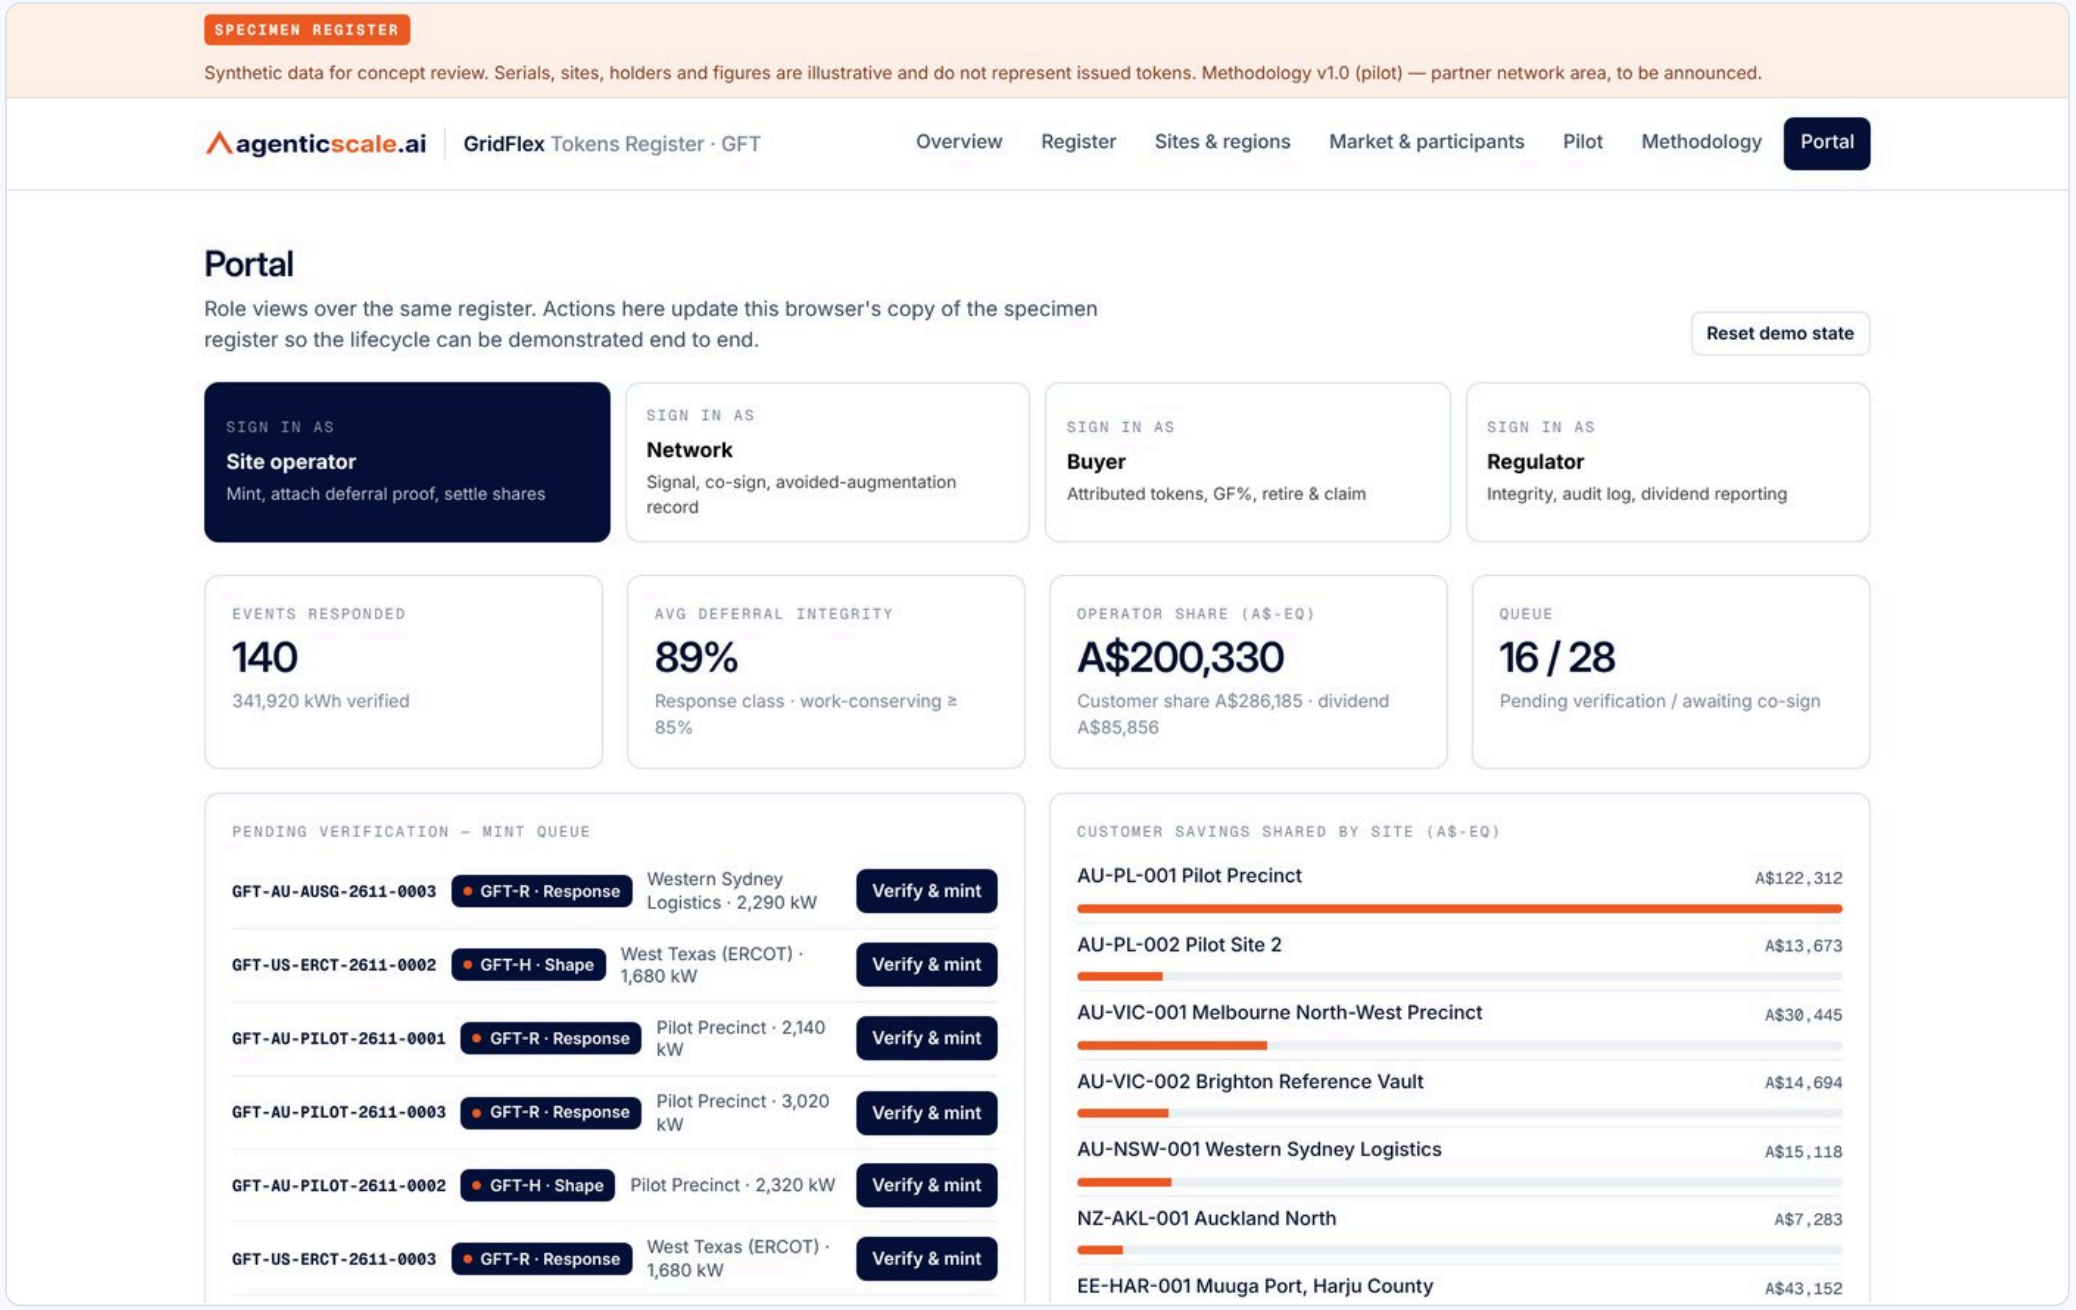

PHASES

0 · Design & shadow minting — Complete

Jul – Oct 2026 — Methodology drafted; signal interface and metering confirmed; events minted under draft conventions to calibrate the baseline model at the pilot node.

11 · Portal

site operator: events, deferral integrity, shares, mint queue and savings by site

SPECIMEN REGISTER

Synthetic data for concept review. Serials, sites, holders and figures are illustrative and do not represent issued tokens. Methodology v1.0 (pilot) — partner network area, to be announced.

METHODOLOGY

GFM-1.0 · effective 09 Nov 2026 · change log: v1.0 initial pilot release.

15 · Methodology v1.0 each clause mapped to the feature that implements it; PDF download

SPECIMEN REGISTER

Synthetic data for concept review. Serials, sites, holders and figures are illustrative and do not represent issued tokens. Methodology v1.0 (pilot) — partner network area, to be announced.

STANDARD

GridFlex Methodology 1.0 (pilot)

The standard every token in this register is issued under, and how each clause is implemented in the product. Pilot network: Partner network · effective 09 Nov 2026 · registry operator AgenticGrid (AgenticScale.ai).

Download the methodology (PDF)

DEFERRAL HORIZON	WORK-CONSERVING DI	MINT / CO-SIGN	SHARES
24 h	≥ 85%	5 + 15 d	50% · 15% · 35%
Window for deferred work to complete	Threshold for the attribute	Business days after the window	Customer · community · operator

§1 **Purpose and scope**

Records verified, place-matched flexibility from AI compute sites connected under a flexible connection arrangement to a distribution network. Pilot jurisdiction: a partner distribution network area (NEM), to be announced. Other regions adopt by reference.

IMPLEMENTED AS

Every record carries methodology ID and network; region and network are first-class filters across the register.

§3 **Unit of issue**

One GridFlex Token (GFT) = one verified event (or availability period / shape window / annual aggregate) at one connection node. Carries kW, kWh, window, node, class, DI, value shares and attribution. Minimum issue 50 kWh.

IMPLEMENTED AS

Token record schema; sub-50 kWh events are not generated; serial format GFT-{country}-{network}-{YYMM}-{seq}.

§4 **Classes**

GFT-R Response · GFT-S Standby · GFT-H Shape (minimum-demand / solar soak) · GFT-A Avoided augmentation (aggregate) · GFT-X Resilience.

IMPLEMENTED AS

Class badge on every record; class-specific fields (availability hours, absorbed kW, annual aggregate).

§5 **Site eligibility**

Flexible connection agreement or equivalent signal channel; revenue-grade interval

IMPLEMENTED AS

Site register records node, vault class, dispatchable MW and tier; only operating
